SUMMARY

Mobile Software Engineer with 2+ years shipping and maintaining production apps in Flutter and native Android (Java) — 12 published applications, 500K+ combined downloads across Play Store and App Store. Owns the full lifecycle: requirements, architecture, implementation, testing, release, and post-release support of live products.

SKILLS

Languages: Dart, Java, Python, C, C++, SQL
Mobile: Flutter, Android SDK, Android Studio, Native Android (Java), iOS
Architecture: Clean Architecture, MVVM, BLoC, SOLID principles, Dependency Injection
Backend & Data: REST APIs, JSON, WebSockets, Firebase (Auth, Firestore, FCM, Crashlytics, Analytics, Remote Config), SQLite
DevOps & Release: Git, GitHub Actions, Play Store, App Store Connect, In-App Purchases, Subscription Billing

EXPERIENCE

Software Engineer, Nymph Solutions Limited Aug 2025 – Present

- Ship AI-powered mobile apps totaling 500K+ Play Store downloads, delivering OCR, audio, and image-processing features on live production codebases.
- Launched In-App Purchase and Subscription Billing (recurring and one-time) across multiple live apps, adding a new recurring revenue stream.
- Cut feature delivery time across 3+ projects by designing a shared Flutter UI component library adopted team-wide.
- Lowered undetected production crashes by instrumenting Firebase Crashlytics, Analytics, and Remote Config across live apps.
- Raised team code quality by defining pull-request review standards and contributing to architecture decisions.

Mobile App Developer, BGCStudio Apr 2025 – Jul 2025

- Extended 4 live-streaming Flutter apps (5,000 users, 800 DAU) with real-time audio/video, live chat, and engagement features — zero disruption to live users.
- Achieved sub-100 ms message latency by integrating WebSockets (Socket.IO) with automatic connection recovery for concurrent streaming sessions.
- Enabled parallel feature development across all 4 apps by implementing modular BLoC architecture with Dependency Injection over shared streaming infrastructure.
- Reduced frame drops on mid-range Android devices by profiling and optimizing rendering during peak concurrent streams.

Flutter Developer (Part-time, alongside B.Sc.), AidFast May 2024 – Mar 2025

- Owned all mobile development for AidFast — BD Health Providers (rated 5.0, 5K+ downloads), a live healthcare platform connecting patients with doctors, ambulances, and blood banks and other health-services across Bangladesh.
- Restructured the app to Clean Architecture (data/domain/presentation) for independently testable, releasable features; shipped appointment booking, provider search, and offline support with zero downtime.

PROJECTS

Caption AI — Auto Subtitle Generator *Native Java, Android SDK*
The app auto-generates subtitles from video and audio, built with native Java and platform media and audio processing pipelines.

OttoMeet — AI Meeting Assistant *Flutter Desktop, WebSockets, SQLite*
Captures system and microphone audio, streams over WebSockets for live transcription, and persists transcripts and meeting summaries in SQLite.

Billso — Invoice Maker *Flutter — Live on Play Store*
Invoicing and billing app for freelancers and small businesses: invoice generation, client management, and PDF export.

Receipt Scanner — Spend Tracker *Flutter, OCR, REST — Live on Play Store*
OCR-powered expense tracker that auto-extracts receipt data, syncs offline-first, and generates categorized spending reports.

E-wallet App *Flutter, Firebase*
Digital wallet with Firebase Auth, P2P transfers, real-time balance updates via Firestore listeners, and encrypted session handling.

EDUCATION & ACHIEVEMENTS

B.Sc. (Eng.), Computer Science & Engineering — Comilla University Jan 2020 – May 2025

- 12 published apps across Play Store, App Store, iPad, and Desktop (500K+ downloads)
- 1000+ problems solved on Codeforces, LeetCode, and UVa — Codeforces Pupil, max rating 1369.
